DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Woodward et al (US 5735922) in view of Nedelec (FR 2221409)

4. Woodward et al teaches methods and apparatus for forming and quenching glass sheets including a furnace and a conveyor heating glass sheets, a roll bending station for pre-bending the glass sheets which includes a roll conveyor and a pair of sets of adjustable, driven bending rolls, a press bending station with upper and lower actuators adapted to be used individually or together and a quench station (see figures and col. 7, line 21 to col. 15, line 43). Woodward et al does not teach that the roll bending station is in the exit end of the furnace. Nedelec teaches similar roll bending rolls located in a heating furnace (see English translation and the figures). It

would have been obvious to a person of ordinary skill in the art at the time the invention was made to locate the roll bending means of Woodward et al inside the furnace of Woodward et al because Nedelec taught that its arrangement was helpful in bending larger sheets of glass.
